VISHAL KONA

DIPLOMA STUDENT | COMPUTER ENGINEERING

7702740097 | konavishal4@gmail.com | Anakapalle, India 531060

EDUCATION

Computers Engineering, Expected in 05/2027
Dr.BRA GMR Polytechnic - Rajahmundry

Secondary Education, 04/2024
VINAY ENGLISH MEDIUM SCHOOL - Anakapalle

PROFESSIONAL SUMMARY

Motivated and detail-oriented Diploma Final-Year Computer Engineering student with a strong foundation in programming, problem-solving and analytical thinking. Eager to apply my technical knowledge in areas like Python, Java, HTML, C, SQL and core computer fundamentals.
A quick learner with a passion for building innovative solutions and contributing effectively in a professional environment.

SKILLS

- C
- Python
- HTML
- SQL

LANGUAGES

- English
- Telugu

PROJECTS

Fake News Detection System

The Fake News Detection System is a web-based application that helps users identify whether a given news article or news statement is real or fake.
It uses machine learning and natural language processing techniques to analyze the content, check authenticity, and provide a clear result with an explanation.
The system accepts user input (text or link), processes it, and classifies the news as real or fake, helping to spread awareness and fight misinformation.

- Text/URL input analysis
- NLP based content processing
- Fake or real classification
- Source and pattern matching
- Detailed explanation with result
- User-friendly web interface
